

## ABSTRACT OF THE DISCLOSURE

A ramp system for bikers, skateboarders and skaters has first and second ramps arranged back to back, each ramp having first and second ends and an upper surface extending between those ends. A connection connects the first ends of the ramps so that the  
5 ramps form a cusp or peak and the second ends of the ramps are spaced-apart and define a plane spaced below the cusp or peak. Preferably, a coping rail extends along the cusp or peak to form a spine which may function as a grind rail.
